                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              implications for structure, membrane binding and ion channel ormation of the annexin family of proteins.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=91065314; PubMed=2147412;
                                                                                                                                                                                                                                                                                                                                                                                                      indirect inhibitor of the thromboplastin-specific is involved in the blood coagulation cascade. SUBUNIT: Monomer. Binds ATRX (By similarity). DOMAIN: A pair of annexin repeats may form one bin calcium and phospholipid.

SIMILARITY: Belongs to the annexin family. SIMILARITY: Contains 4 annexin repeats.

CAUTION: This protein has been independently seque
                                                                                                                                                                                                                                                                                                                                                        seven groups under different names!

-!- SUBUNIT: Monomer. Binds ATRX and DNMT1.

-!- DOMAIN: A pair of annexin repeats may form one calcium and phospholipid.

-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY: Contains 4 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  entities requires a license agreement (S or send an email to license@isb-sib.ch).

intestine cDNA

-i- FUNCTION: Calcium/phospholipid-binding protein membrane fusion and is involved in exocytosis Genome 7:509-517(1996) 1 which (By sim ich promotes similarity).

-!- SUBUNIT: Monomer.
-!- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-!- MISCELLANEOUS: Seems to bind one calcium ion with high affinity
-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY: Contains 4 annexin repeats.

-!- MISCELLANEOUS: Seems to bind one calcium ion with high affinity.
-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY: Contains 8 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Biochim. Biophys. Acta 1387:103-116(1998).

-- FUNCTION: May associate with CD21. May regulate the release of Ca(2+) from intracellular stores.

--- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.

--- PTM: Phosphorylated in response to growth factor stimulation (By
                                                                                                                                                                                                                                                                                                                                                        Pfam; PF00191; annexin;

                                                  -!- FUNCTION: Calcium/phospholipid-binding protein which promotes membrane fusion and is involved in exocytosis.
-!- DOMAIN: A pair of annexin repeats may form one binding site for calcium and phospholipid.
-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY; Contains 4 annexin repeats.
                                                                                                            comparison with other synexins.";

-i- PTM: Phosphorylated in response to growth
-i- MISCELLANEOUS: Seems to bind one calcium i.
-i- SIMILARITY: Belongs to the annexin family.
-i- SIMILARITY: Contains 8 annexin repeats.

-!- MISCELLANEOUS: Seems to bind one calcium ion with high affinity.
-!- SIMILARITY: Belongs to the annexin family.
-!- SIMILARITY: Contains 8 annexin repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-APR-1990 (Rel. 14, Created)

New isolated polypeptides and polynucleotides, useful for preventin treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders, lymphoid cell disorders, bone degenera disorders, and infections. WPI; 2003-040556/03. N-PSDB; ABX05088.

Claim 9; SEQ ID NO 629; 235pp; English.

The invention relates to human polynucleotides and the polypeptides encode. The polynucleotides and polypeptides are useful in diagnost forensics, gene mapping, medical imaging, identification of mutatic responsible for genetic disorders or other traits, assessing biodiv and producing many other types of data and products dependent on DN

 The fusion was constructed using site-directed mutagenesis to fuse PAP-I encoding amino acid 1-136 with a protein C DNA sequence at the codon for amino acid 46. A plasmid contg. this construct was transfected into BHK cells which were then cultured to produce PAP-I protein C fusions which

                                                                                                                                                                                                                                                                                                                                                                                       Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cellifications, osteoporosis, osteoparthritis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or bacterial) or autoimmune diseases (e.g. diabetes, atopic demnatitis). Sequences ABG9988-ABG9989 and ABU00010-ABU00433 represent human polypeptides of the invention. Note: The sequence data for this patent not represented in the printed specification but is based on sequence
                                                                                                                                                                                                                                                                                                                                                                                                                           Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                               Polynuclectide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynuclectide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein activity.
neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 ar used in the course of the invention for the identification and
                                                                                    identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as
                                                                                                      or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnost

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence given is the amino acid sequence of CPB-I. CPB-I was used within a method which involved adding basic amino acids to it which resulted in its stabilisation. This lead to the production of CPB-I which keeps its activity when it is frozen, molten or has been processed by several procedures. (Updated on 10-MAR-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Stabilisation of CPB-I for drug compsn. - selected from lysine, arginine and/or orni

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-JUL-1992.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 glucosamine, xylose, saccharose,or dextran. The processed by sever of CPB-I which kept its activity when it had been processed by sever treatments. CPB-I can be used as a medicine for antihemagglutination treatments. CPB-I can be used as a medicine for antihemagglutination are made and corneal diseases. (Updated on 10-MAR-200)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence given is the amino acid sequence of CPB-1. CPB-1 was us within the method of the invention which involved adding saccharides it which resulted in its stabilisation. The saccharide was pref. glucosamine, xylose, saccharose, or dextran. This lead to the product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 2; 4pp; Japanese

                                                                                                                                                                                                                                                                                           The invention relates to eye drops contain CPB-I (anexin V) and a polyhydric alcohol having a carbonyl value of not more than 5micro Mol/g. The eyes drops are for treating e.g. corneal diseases. Such eye drops are without unpleasant irritation upon dropping but with satisfactory long-term storage stability. The present sequence is the human CPB-I (calcium/phospholipid binding) protein
                                                                                                                                                                                                                                                             Sequence 319 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; Page 13-14; 16pp; Japanese.

C Claimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence C which is differentially regulated in an animal subjected to pain and a C that increases or decreases the expression of the polymucleotide sequence C that is differentially expressed in neuronal tissue of a first animal C the expression of a polymucleotide sequence which is differentially expressed in neuronal tissue of a first animal C the expression of a polymucleotide sequence which is differentially C expressed in an animal subjected to pain, a method for identifying a compound which regulates C compound that regulates the activity of one or more of the polymucleotides, a method for producing a pharmaceutical compound or small molecule that regulates the c polymucleotide given in the C specification, a method for identifying a compound useful in treating C polypeptides or their antibodies. The polymucleotide or the compound that c polypeptides given in the C pain and a pharmaceutical composition comprising the one or more C pain (e.g. spinal segmental nerve injury (CNID) and spared nerve injury (SNI)) in an animal (e.g. gene C polymic activity is useful for preparing a medicament for treating C pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene C the specification, but was obtained in electronic form directly from WIPO at ftp. wino.inf/muh/muhlished nct semmences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAP82317;
                                                                                                                                                                                                       The protein does not contain a leader peptide sequence, indicating paper is probably not constitutively secreted. The Met residue is real in a post-translational event and the newly formed NH2-terminal at in a blocked by acetylation. It binds to phospholipid and inhy phopholipase A2. The protein can substitute heparin or other anticoagulants in the treatment of disseminated intravascular coagulation, deep vein thrombosis, or other disorders. It also has antinflammatory properties. (Updated on 25-MAR-2003 to correct PA antinflammatory properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      06-FEB-1987;

                                                                             Sequence vascular anticoagulating protein (VAP) VAC-alpha (Asp?2).
                                                                                                                                                                                                                                                                                                                      This polypeptide exhibits strong anticoagulant activities and is useful for the treatment and prevention of e.g. thrombosis or disseminated intravascular coagulation in the brain, heart and peripheral blood vessels, such as cerebral and myocardial infarction. It has no antigenicity against man and can be produced in large amts. using recombinant methods. (Updated on 10-MAR-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                            The DNA is produced by determining the amino acid sequence of isolated and highly purified VAPs, constructing DNA probes on the basis of this sequence, using the probes to search through suitable cDNA libraries, isolating cDNA that hybridises with the probes, by inserting the cDNA into a suitable vector, and using the vector to transform a host organism. VAC-alpha has anticoagulant activity under certain conditions, but loses this activity in the event of severe bleeding. It acts by the conditions of the conversion of factor X to factor X and conversion of prothrombin to thrombin. It is structurally related to lipocortin I (Nature, 320, 77, 1986) and lipocortin II (cell, 46, 191/120, 1986) and has similar antiinflammatory and phospholipase inhibitory activity.

                       Human lipocortin-V was isolated from a lambda gt10 human peripheral blood lymphocyte cDNA library with rat lipocortin-V cDNA of lambda RLipo V-l as probe. Lipocortins are anti-inflammatory agents and can be used to treat arthritic, allergic, dermatologic, ophthalmic, and collagen diseases. See also AAN90598, AAN90599, and AAP91362

                                                                                                                                        This vascular anti-coagulating protein (VAC)-alpha is used in the preparation of monoclonal antibodies (MAbs). The VAC-alpha is inject into a host animal, in conjugation with ey keyhole limpet haemocyan and the B-cells from immunised hosts are then fused with myeloma ce The resultant hybridomas (VAA-8 and VAA-9) produce Abs specific to alpha. Abs can be used as immunoassay reagents to detect VAC protein affinity ligands for protein purificm. and as medicaments for bindi and/or neutralising VAC proteins in vivo. See also ANN91354 and Epandors neutralising VAC proteins in vivo. See also ANN91354 and Epandors neutralising VAC proteins in vivo. See also ANN91354 and Epandors neutralising VAC proteins in vivo.
